CRΞO

Europe's Secure Line of Communication

*The Digital Infrastructure
for Europe's Secure Future.*

Strategic positioning
for national and EU cyber security

CREO

Before the actual development phases begin, a clearly defined structure is provided. In this step, central technical foundations are laid: architecture concepts are developed, system components are synchronized, and security requirements are concretized. The goal is to create a reliable foundation on which the CREO platform can be efficiently, modularly, and securely further developed. At the same time, prioritized use cases are identified to implement the solution targeted and practice-oriented.

1. Initial situation & Relevance

Geopolitical reality 2025: War, cyber attacks, hybrid threats
- EU and Germany are investing heavily in digital security

CREO as the 15th development stage of a communication solution since 2000:
- High-security, flexible, scalable
- Made in Germany

2. CREO – Security from Hesse, developed for Europe

Stage level: Targeted partnerships in Hesse
- WIBank, Hessian Ministry of the Interior, Frankfurt Chamber of Commerce (IHK), Starthub Hessen

Nationwide relevance:
- Support for NIS2 and Cyber Security Strategy
- CREO as a trusted solution for authorities

3. EU Cyber Security Strategy as a growth driver

- ProtectEU, Digital Europe, NIS2, Health Action Plan
- CREO as a GDPR-compliant platform "made in Germany"
- High scalability, interoperability, and integrability

4. Business Model & Strategic Added Value

- Authorities as Key Partners - Stable Foundation & References
- Participation in funding and procurement programs
- Company value increased by Security-by-Design
- CREO as a platform for communication & secure data spaces

5. Development Stages

CREO

Development in three stages - CREO as digital infrastructure for Europe's secure future

CREO is more than just an app - it's Europe's answer to the growing demands for digital sovereignty and secure communication. The development takes place in three clearly structured phases, each with a fully functional, immediately usable app version. The special feature: Each phase offers a genuine product with functional benefits, high security, and unlimited scalability. Investors not only profit early from the product maturity but also secure participation in a key technology for authorities, companies, and critical infrastructure in Europe.

PHASE 1 - CREO Basic Communication

Development Time: 3 Months

Secure Base-App for Encrypted Communication

- Full-featured Communication App for Android & iOS
- Features: Text Messages, Voice Calls, Secure File Storage, Encrypted Notes
- AES-512 & IAE Encryption – Maximum Data Security
- Logo Labeling and Individual Branding Already Integrated
- Use of Decentralized SEP Network for Tap-Proof Communication

- Automatic Self-Destruction of App in Case of Attack – Integrity of Data Guaranteed
- Worldwide Unlimited Scalable – No User Limit
- Ideal Investment Entry Point: Immediate Proof-of-Concept, Real Application, Direct ROI

PHASE 2 - CREO Security Platform

Development Time: 3 Months

Expansion to a Secure Video Platform

- Expansion to include Secure Video Telephony, Meetings and Conferences
- Comparable to Zoom or Microsoft Teams - but with the highest security
- Platform availability for Android, iOS, Windows, macOS and Linux
- Additional network security through parallel use of TOR + SEP

- Integrated IPS (Intrusion Prevention System) for active threat defense
- Introduction of "Panic Accounts" for emergency shutdown in case of unauthorized access
- Expansion of target groups to include enterprises, government agencies, educational institutions
- Attractive investment opportunity in the growing market of secure collaboration platforms

PHASE 3 - CREO Integration Platform

Development Time: 3 Months

The Ultimate Security Platform with Plugin Ecosystem

- Introduction of a Modular Plugin Framework for Function Extension
- Integration of internal and external plugins (e.g. Health Records, Calendar, Cloaking Device)
- Users will be actively informed in case of infection - full transparency with simultaneous system resilience
- Highest technical level of the CREO platform - fully protected, independent, and expandable

- Establishment of a digital ecosystem with high economic potential
- Ideal entry point for investors who prioritize long-term infrastructure and integration capabilities

Conclusion:

As each development stage is reached, not only does the functionality increase, but also the strategic, social, and economic value of the platform. Those who invest today are laying the foundation for Europe's digital independence - and benefit from their leading position in a new generation of secure communication technology.

CREO

THE ULTIMATE APP

Mission Statement & Goals:

With the communication app CREO, we present a solution that not only meets the highest security standards, but also provides the foundation for a digital platform of free speech. Our vision is to establish the app as a pioneer for secure, independent communication in Europe
